Issuer Rating	-	-	[ICRA]A- (Stable); upgraded from [ICRA]BBB+ (Stable) – put on Notice of Withdrawal	
<b>Total Rated Limits</b>	121.00	103.96		

<sup>^</sup>reduced to nil as per request of company

As per request from Chhattisgarh Hydro Power LLP (CHPLLP), ICRA has put the Issuer rating of [ICRA]A- (Stable) on notice of withdrawal for a period of 30 days. As per ICRA's policy, the rating will be withdrawn after 30 days from the date of this withdrawal notice.

#### **Rationale**

The rating upgrade factors in the significant improvement in the generation levels for CHPLLP in FY2020 and FY2021, which has resulted in improved profitability and debt metrics and provides further predictability to its future cash flows. ICRA notes that, aided by a favourable hydrology, CHPLLP's plant load factor (PLF) for the 24-MW Gullu hydroelectric project increased to 43.9% in FY2020 from 30.5% in FY2019. In FY2021, the generation levels improved further, with the LLP achieving PLF of 50.5%. The rating continues to factor in the favourable regulatory environment (exemption from scheduling norms and high feed-in tariffs for small-hydro projects in Chhattisgarh). The rating reflects the limited offtake risks for the Gullu hydroelectric project, supported by a 35-year long-term power purchase agreement (PPA) with Chhattisgarh State Power Distribution Company Limited (CSPDCL) at a remunerative fixed feed-in tariff of Rs. 5.21/unit, which leads to healthy business returns. The rating derives strength from the availability of a debt service reserve account (DSRA), amounting to Rs. 10 crore, which would adequately cover six months' debt service requirements for the existing project loan. In addition, the elongated tenure of the loan, with a ballooning repayment, taken at a competitive interest rate, leads to healthy debt service coverage ratio (DSCR), strengthening CHPLLP's credit profile. ICRA expects CHPLLP's controlling partner, Sarda Energy & Minerals Limited (SEML, the flagship entity of the Sarda Group), to be willing to extend financial support to CHPLLP, should there be a need, given the strategic importance that CHPLLP holds for SEML, for meeting its diversification objectives. The entity has received funding support from the Sarda Group in the past for completing the operational project at Gullu. Further, strong parentage has led to an increased financial flexibility for CHPLLP, as indicated by its ability to raise long-term 11-year door-to-door tenure loan at an attractive interest rate.

The rating is, however, tempered by CHPLLP's exposure to hydrology risks, given that the profits are directly linked to the rainfall levels. In addition, the entity remains exposed to asset and customer concentration risks as well, given that it has a single asset delivering power to a single offtaker. The rating also reflects CHPLLP's sizeable upcoming debt-funded capex plan for constructing another 24.9-MW small hydropower project in Chhattisgarh, exposing the LLP to execution risks, and would keep the leverage ratios at an elevated level in the medium term, during the project construction period. The rating is also constrained by the weak financial profile of the offtaker (CSPDCL), which could potentially lead to working capital blockage in

www.icra .in

<sup>\*</sup>Instrument details are provided in Annexure-1

future. Given its corporate status as an LLP, CHPLLP inherently suffers from the potential risk of capital leakage due to withdrawal by the partners, which could adversely impact its capital structure and leverage metrics in future.

Going forward, CHPLLP's financial profile will be supported by the accruals generated from the operational hydropower project as well as the demonstrated funding support from the Sarda Group. In addition, it is expected to benefit from the Group's experience in developing other hydropower projects, which can be leveraged during the development of the upcoming 24-MW project within the budgeted time and costs.

The Stable outlook on the rating reflects ICRA's opinion that CHPLLP will be able to operate the Gullu hydroelectric project at a steady-state PLF of over 40% over the medium term, which is significantly higher than the minimum guaranteed supply commitment of 30%. ICRA expects that CHPLLP would be able to maintain a healthy collection efficiency from CSPDCL, which would help to generate adequate retained cash flows to service its scheduled debt repayments.

## Key rating drivers and their description

#### **Credit strengths**

Stable earnings from the hydropower project in Gullu; improvement in generation levels in FY2020 and FY2021 – CHPLLP has commissioned a 24-MW small-hydropower project at Gullu, in Chhattisgarh, on July 17, 2017. With the completion of synchronisation on March 31, 2017, the project is eligible for 80 IA tax benefits, which support its profits and cash accruals. The LLP has been able to generate free cash flows since its first year of operations in FY2018. Supported by favourable hydrology, the PLF from the Gullu hydroelectric project steadily increased to 43.9% in FY2020 and 50.5% in FY2021 from 30.5% in FY2019. This increase in generation levels supported an improvement in the overall profitability and debt metrics, thereby imbuing greater predictability to its future cash flows. ICRA notes that the LLP has received a capital subsidy of Rs. 5 crore from the Ministry of New and Renewable Energy (MNRE), which supported the overall business returns.

Limited offtake risks for Gullu hydroelectric project supported by long-term PPA — CHPLLP has signed a 35-year long-term PPA with CSPDCL, which covers the entire economic life of the project at a fixed feed-in tariff of Rs. 5.21/unit. Moreover, ICRA notes that the non-solar renewable purchase obligation (RPO) trajectory in Chhattisgarh has been steadily increasing to 8.5% in FY2021 from 7.5% in FY2019, which partly mitigates the off-take risks. Additionally, to incentivise investments in setting up small hydro projects in the state, the Chhattisgarh State Electricity Regulatory Commission (CSERC) has increased the feed-in tariffs for the upcoming new small hydro projects in the state to Rs. 5.96/unit in FY2020 and Rs. 6.15/unit in FY2021 from Rs. 5.21/unit in FY2018, which indicates a conducive regulatory environment.

Healthy business returns supported by adequate fixed feed-in tariff – The tariff for the 24-MW operational hydroelectric project at Gullu has been fixed at a reasonable level of Rs. 5.21/unit for the entire term of the PPA. Supported by healthy generation levels and remunerative tariffs, the Gullu hydroelectric project is expected to yield a healthy post-tax project IRR¹ of 16.7% and a comfortable cumulative DSCR of 2.01 times. The capital cost intensity for Rehar-I small hydro project (SHP) is likely to remain higher at ~Rs. 10.4 crore/MW against Rs. 8.9 crore/MW for Gullu. Given the prevailing feed-in tariff of Rs. 6.15/unit, the return indicators for the Rehar-I SHP are estimated to remain favourable as well.

**Liquidity buffer from DSRA strengthens credit profile** – In addition to the attractive tariff levels and timely collections for Gullu, which supports positive retained cash flows, CHPLLP's liquidity profile is also strengthened by the presence of two quarters of DSRA kept as fixed deposit with the lender.

Extended ballooning tenure of project debt leading to a comfortable debt service coverage ratio — The loan for the 24-MW Gullu hydropower project has an extended repayment tenure of 10 years with a ballooning structure (one-year moratorium and 10-year repayment). With high interest servicing requirement during the initial years, the ballooning repayment pattern would give CHPLLP an adequate headroom to meet its debt service requirements. ICRA expects CHPLLP's DSCR to remain comfortable at ~2.0 times between FY2022 and FY2024.

1 Internal	rate	of ret	urn

Exemption from the day-ahead scheduling to plug revenue leakage going forward — CHPLLP had to comply with the day-ahead scheduling norms before December 2019. Given the variability in rainfall and the challenges associated with forecasting generation in a run-of-the-river hydroelectric project, CHPLLP's actual generation remained higher than scheduled generation during the previous years. As the entity was able to bill its customer for only the scheduled generation, this led to revenue leakages worth ~Rs. 1.53 crore in FY2020. However, CSERC waived the scheduling requirement for renewable energy projects in December 2019. In FY2021, the LLP has been able to achieve PLF of 50.5% against the design PLF of 50.13%.

Demonstrated funding support from Sarda Group – CHPLLP's partners include SEML (which has a profit-sharing ratio of 72%) and Sarda Energy Limited (which is a wholly-owned subsidiary of SEML and has a profit-sharing ratio of 28%). ICRA notes that CHPLLP has received funding support from the Sarda Group in the past for completing the operational project at Gullu. Further, the strong parentage has led to an increased financial flexibility, as indicated by the entity's ability to raise long-term 11-year door-to-door tenure loan at a competitive interest rate. This apart, it benefits from the Group's experience in the development and operation of other hydropower projects.

## Credit challenges

**Exposure to hydrology risks** – CHPLLP's PPA with CSPDCL is based on a single part feed-in tariff, and consequently, the entire hydrology risk is borne by the seller. Further, the PPA provides for penalty<sup>2</sup> payable by the seller to the offtaker in case the generation in any fiscal falls below the minimum guaranteed supply against a plant load factor (PLF) of 30%. Consequently, in years of poor hydrology, when the PLF is lower than 30%, CHPLLP remains exposed to lower revenues and potentially faces the risk of liquidated damages for a shortfall in the minimum guaranteed supply.

**Exposure to asset and customer concentration risks** – As on date, CHPLLP has a single operational small hydropower project, supplying power to a single offtaker. This exposes it to asset and customer concentration risks. Moreover, the entity's small scale of operations remains a constraint.

Exposure to execution risks due to sizeable debt-funded capex plans – Apart from the operational Gullu project, CHPLLP has been allotted three more small-hydropower projects in Chhattisgarh having a cumulative capacity of around 74-MW. The construction of another 24.9-MW Rehar-I SHP (in Chhattisgarh) is expected to commence in the near term. Given the geological challenges associated with the execution of hydroelectric projects, the entity would be exposed to execution risks during the construction period. The Rehar-I SHP's budgeted cost has been pegged at Rs. 250 crore (Rs. 10.4 crore/MW), to be funded in a debt-to-equity mix of around 70:30. The sizeable debt-funded capex is anticipated to lead to a deterioration in CHPLLP's total debt/OPBITDA metric during the project construction period. ICRA estimates that due to the gradual absorption of Rehar-I SHP's project debt in the balance sheet, CHPLLP's total debt/OPBITDA is likely to reach a peak level of around 5.4 times in FY2025 from 1.9 times in FY2021.

Weak financial profile of the offtaker – The weak financial profile of CSPDCL exposes CHPLLP to the risk of potential working capital blockage in future. However, ICRA notes that payments from CSPDCL have been received within 60-90 days thus far, which, in turn has supported its healthy free cash flow generation.

Risk of capital withdrawal by the partners, which could adversely impact capital structure and leverage metrics – In the past, CHPLLP has been utilising a part of the surplus funds in extending advances to SEML and repaying unsecured loans from the partners. Given its corporate status as an LLP, the entity inherently suffers from the risk of capital leakage due to withdrawal by the partners, which could adversely impact its capital structure and leverage metrics in future.

# **Liquidity position: Adequate**

CHPLLP's liquidity is **adequate**, with the entity expected to generate positive retained cash flows, which can adequately cover its scheduled debt service obligations. Moreover, the LLP has been generating positive free cash flows during the last three years. However, with the Rehar-I SHP execution expected to gradually pick up from FY2022, its free cash flows are likely to remain negative thereafter during the project construction period. ICRA understands that the tie-up of project debt before commencement of Rehar-I SHP construction would mitigate funding risks to a large extent. CHPLLP's liquidity profile is also

www.icra .in Page

<sup>&</sup>lt;sup>2</sup> In proportion to the penalty imposed by the State Electricity Regulatory Commission on CSPDCL for non-fulfilment of renewable purchase obligations

supported by the presence of a DSRA of Rs. 10 crore with the lender, which would cover debt service requirements for two quarters in case of any cash flow shortfalls.

#### Rating sensitivities

**Positive factors** – ICRA could upgrade CHPLLP's rating if it is able to commission the upcoming Rehar-I SHP within the budgeted time and costs, or there is significant improvement in credit profile of parent SEML.

**Negative factors** – Pressure on CHPLLP's rating could arise, for reasons including, if its PLF levels fall below 30% on a sustained basis, leading to a financial burden emanating from the minimum guaranteed supply commitment to the buyer, or if there is a significant deterioration in the collection efficiency resulting in the retained cash flows being consistently lower than the scheduled debt service obligations, or it is not able to tie-up PPA at remunerative tariff for Rehar-I SHP in a timely manner prior to commissioning of the project. Deterioration in credit profile of the parent, SEML, or weakening in linkages with SEML/ change in support philosophy of the parent towards CHPLLP may also lead to pressure on the rating.

#### Analytical approach

Analytical Approach	Comments	
<b>Applicable Rating Methodologies</b>	Corporate Credit Rating Methodology	
	Parent Company: Sarda Energy & Minerals Limited (SEML)	
Parent/Group Support	ICRA expects CHPLLP's controlling partner, SEML, to be willing to extend financial support to CHPLLP, should there be a need, given the strategic importance that CHPLLP holds for SEML for meeting its diversification objectives. ICRA also expects SEML to be willing to extend financial support to CHPLLP out of its need to protect its reputation from the consequences of a Group entity's distress.

## **About the company**

CHPLLP (formerly Chhattisgarh Hydro Power Pvt. Ltd) was incorporated on May 24, 2005 as a private limited company. It was converted into an LLP on September 17, 2010. The partners of CHPLLP include SEML (72% profit share), and Sarda Energy Limited (28% profit share).

CHPLLP has commissioned a 2x12-MW Gullu small hydropower plant in the Jashpur district of Chhattisgarh. The plant has entered into a long-term PPA with CSPDCL for a tenure of 35 years at an attractive feed-in tariff of Rs. 5.21/unit. It is looking to construct another 3X8.3-MW small-hydroelectric project (Rehar-I) on the river Rehar in the Surajpur district of Chhattisgarh.

## Complexity level of the rated instruments

Instrument	Complexity Indicator		
Long term- Term loan	Simple		
Long Term – Non-Fund Based	Very Simple		

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments, is available on ICRA's website: <a href="https://www.icra.in">www.icra.in</a>

## **About ICRA Limited:**

ICRA Limited was set up in 1991 by leading financial/investment institutions, commercial banks and financial services companies as an independent and professional investment Information and Credit Rating Agency.

Today, ICRA and its subsidiaries together form the ICRA Group of Companies (Group ICRA). ICRA is a Public Limited Company, with its shares listed on the Bombay Stock Exchange and the National Stock Exchange. The international Credit Rating Agency Moody's Investors Service is ICRA's largest shareholder.
