Satin Creditcare Network Ltd.: Provisional [ICRA]A+(SO) assigned to Series A1 PTC backed by microfinance loan receivables issued by Oceana 04 2022

Summary of rating action

Trust Name	Instrument*	Rated Amount (Rs. crore)	Rating Action
Oceana 04 2022	Series A1 PTC	31.99	Provisional [ICRA]A+(SO); assigned

*Instrument details are provided in Annexure I

Rating in the absence of pending actions/documents	No rating would have been assigned as it would not be meaningful
--	--

Rationale

ICRA has assigned a provisional rating to the pass-through certificates (PTCs) issued under a securitisation transaction originated by Satin Creditcare Network Ltd. (Satin; rated [ICRA]A- (Negative)/[ICRA]A1). The PTCs are backed by a pool of Rs. 42.30-crore microfinance loan receivables (underlying pool principal of Rs. 35.54 crore).

The provisional rating is based on the strength of the cash flows from the selected pool of contracts. Credit enhancement is available in the form of (i) a cash collateral (CC) of 8.00% of the initial pool principal to be provided by the originator, (ii) principal subordination of 10.00% (through over-collateralisation) and (iii) the entire excess interest spread (EIS) of 12.01% of the initial pool principal in the structure, as well as the integrity of the legal structure. The provisional rating is subject to the fulfilment of all the conditions under the structure, due diligence audit of the pool, review by ICRA of the documentation pertaining to the transaction, and the furnishing of a legal opinion on the transaction to ICRA by Satin.

Key rating drivers

Credit strengths

- Availability of credit enhancement in the form of EIS, over-collateralisation and CC
- Moderate seasoning (average of ~6 months) and amortisation (~20% pre-securitisation) profile as on the cut-off date
- One of the largest players in microfinance industry with established track record

Credit challenges

- High geographical concentration with top 3 states contributing around 68% to the initial pool principal
- Exposed to inherent credit risk in the asset class, given the unsecured nature of the product and the marginal borrower profile; performance of the pool would remain exposed to macro-economic shocks/business disruptions/natural calamities that may impact the income-generating capability of the borrower

Description of key rating drivers highlighted above

According to the transaction structure, the loan pool receivables will be assigned at par to the PTC investors. The interest on the PTC securities, at predetermined rates on the outstanding principal, is promised on a monthly basis while the principal is promised on the final scheduled maturity date (August 27, 2024).

During the tenure of Series A1 PTC, the collections from the pool, after making the promised interest payouts to Series A1 PTC, will be used to make the expected principal payouts to Series A1 PTC (not promised). Any shortfall in making the expected principal payment to Series A1 PTC would be carried forward to the subsequent payout. The residual cash flows from the pool, after making the promised and expected payouts, would be used for the prepayment of the Series A1 PTC principal; no residual

cash flow will be paid to the residual beneficiary. Hence, the actual tenure of the PTCs is expected to be shorter owing to such acceleration.

The first line of support for Series A1 PTC in the transaction is in the form of over-collateralisation of 10.00% of the initial pool principal. Further credit support is available in the form of an EIS of 12.01% and a CC of 8.00% of the initial pool principal (Rs. 2.84 crore), to be provided by Satin. In the event of a shortfall in meeting the promised PTC payouts during any month, the trustee will utilise the CC to meet the shortfall.

There are no overdues in the pool as on the cut-off date. The pool has moderate pre-securitisation amortisation of ~20% as on the cut-off date. Geographical concentration is high with the top 3 states contributing ~68% to the initial pool principal amount. At the district level, the top 5 districts account for ~12% of the initial pool principal amount. The company had witnessed an increase in the delinquencies at the portfolio level following the onset of the Covid-19 pandemic, which has now started to moderate. The pool's performance would remain exposed to the inherent credit risk in the asset class. Furthermore, macro-economic shocks/business disruptions/natural calamities that may impact the income-generating capability of the borrower could have a bearing on the performance, given the marginal borrower profile.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after taking into account the performance of the originator's portfolio as well as the characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool of contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 4.5-5.5% of the initial pool principal, with certain variability around it. The prepayment rate for the underlying pool is estimated at 2.4-9.0% (with a mean of 6.0%) per annum.

Liquidity position: Strong

As per the transaction structure, only the interest amount is promised to the PTC holders on a monthly basis while the principal amount is promised on the scheduled maturity date of the transaction. Overall, the cash flows from the pool and the available credit enhancement are expected to be comfortable to meet the payouts to the Series A1 PTC investors.

Rating sensitivities

Positive factors – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade.

Negative factors – The sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade.

Analytical approach

The rating action is based on the analysis of the performance of Satin’s portfolio till September 2022, the key characteristics and composition of the current pool, the performance expected over the balance tenure of the pool, and the credit enhancement cover available in the transaction.

Analytical Approach	Comments
Applicable rating methodologies	Rating Methodology for Securitisation Transactions
Parent/Group support	Not Applicable
Consolidation/Standalone	Not Applicable

Pending actions/documents required to be completed for conversion of the provisional rating into final

The assigned rating is provisional and would be converted into final upon the execution of:

1. Trust deed
2. Assignment agreement
3. Legal opinion
4. Trustee letter
5. Chartered Accountant’s know your customer (KYC) certificate
6. Any other documents executed for the transaction

Validity of the provisional rating

The Trust is expected to complete the pending actions/execute the pending documents in the near term. However, in case of continued pendency of the actions/documents beyond one year of this publication, the provisional rating would be withdrawn for the transaction even if the instrument has been issued.

Risks associated with the provisional rating

In case the issuance is completed, but the pending actions/documents are not completed for the transaction within one year (validity period) from the assignment of the rating, the provisional rating will be withdrawn in accordance with ICRA’s Policy on Provisional Ratings available at www.icra.in.

About the company

Satin Creditcare Network Ltd. (Satin), which was set up in 1990 to provide individual business loans to urban shopkeepers, started providing group lending services to the rural poor in 2008. It was registered with the Reserve Bank of India (RBI) as a deposit-taking non-banking financial company (NBFC) under the name, Satin Leasing and Finance Company Limited. Following its conversion into a public limited company in 1994, the company was renamed Satin Creditcare Network Ltd. in 2000. It stopped accepting public deposits from November 2004 and the RBI changed its classification to Category B (non-deposit taking) from Category A (deposit taking) in February 2009 and converted it into an NBFC-microfinance institution (NBFC-MFI) in November 2013. The company’s microfinance operations are based on the Grameen Bank joint liability group (JLG) model and were spread across 1,039 branches in the country, as on September 30, 2022, on a standalone basis and 1,237 branches for the Group as a whole.

Satin is listed on the National Stock Exchange of India Limited (NSE), Bombay Stock Exchange (BSE) and Calcutta Stock Exchange. As on September 30, 2022, the company’s consolidated managed portfolio stood at Rs. 7,575 crore. It reported a net loss of Rs. 153 crore in H1 FY2023 against a net profit of Rs. 21 crore in FY2022 at the consolidated level.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1 PTC	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
