January 16, 2023

Satin Creditcare Network Ltd.: Rating confirmed as final for PTCs backed by microfinance loan receivables issued by Simba 09 2022

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Simba 09 2022	Series A1 PTC	35.23	[ICRA]A-(SO); provisional rating confirmed as final

**Instrument details are provided in Annexure I*

Rationale

In September 2022, ICRA had assigned a Provisional [ICRA]A-(SO) rating to Pass-Through Certificates (PTCs) issued by Simba 09 2022. The PTCs are backed by a pool of Rs. 39.14-crore (principal amount; receivables of Rs. 47.12 crore) of microfinance loan receivables originated by Satin Creditcare Network Ltd. (Satin; rated [ICRA]A-(Negative)/[ICRA]A1). Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

A summary of the pool's performance after the December 2022 payout is shown in the table below.

Parameter	Simba 09 2022
Months post securitisation	3
Pool amortisation	12.48%
PTC Series A1 amortisation	16.87%
Cumulative collection efficiency (including advance collections)	99.69%
Cumulative prepayment rate	3.90%
Loss-cum-0+ days past due (dpd)	0.48%
Loss-cum-30+ dpd	0.16%
Loss-cum-90+ dpd	0.00%
Cumulative cash collateral utilisation	0.00%

Key rating drivers

Credit strengths

- Availability of credit enhancement in the form of excess interest spread (EIS), over-collateralisation and cash collateral (CC)
- No overdue contracts in the pool as on the cut-off date
- Average seasoning of ~5 months and average pre-securitisation amortisation of ~18% as on the cut-off date
- One of the largest players in microfinance industry with established track record

Credit challenges

- High geographical concentration with contracts from top 3 states contributing ~53% of the pool principal as on the cut-off date
- Exposed to inherent credit risk in the asset class, given the unsecured nature of the product and the marginal borrower profile; performance of the pool would remain exposed to macro-economic shocks/business disruptions/natural calamities that may impact the income-generating capability of the borrower.

Description of key rating drivers highlighted above

According to the transaction structure, the loan pool receivables will be assigned at par to the PTC investors. The interest on the PTC securities, at predetermined rates on the outstanding principal, is promised on a monthly basis while the principal is promised on the final scheduled maturity date (July 17, 2024). On each payout date, the promised cash flow schedule for PTC Series A1, on a monthly basis, will comprise only the interest (at the predetermined yield) payment; the principal payment would be promised on the final payout date. During the tenure of Series A1 PTC, the collections from the pool, after making the promised interest payouts to Series A1 PTC, will be used to make the expected principal payouts to Series A1 PTC (not promised). Any shortfall in making the expected principal payment to Series A1 PTC would be carried forward to the subsequent payout. The remaining cash flows/proceeds, after the making the promised and expected payouts, would be used for the prepayment of Series A1 PTC.
The first line of support for PTC Series A1 in the transaction is in the form of over-collateralisation of 10.00% of the initial pool principal. Further credit support is available in the form of an EIS of 13.30% and a CC of 5.00% of the initial pool principal (Rs. 1.96 crore), provided by Satin. In the event of a shortfall in meeting the promised PTC payouts during any month, the Trustee will utilise the CC (in case the over-collateral and EIS are insufficient) to meet the shortfall.

There were no overdues in the pool as on the cut-off date. The pool had moderate pre-securitisation amortisation at 18% as on the cut-off date. The pool had high geographical concentration with the top 3 states contributing 53% to the initial pool principal amount. At the district level, the top 5 districts accounted for ~9% of the initial pool principal amount. The company had witnessed an increase in the delinquencies at the portfolio level following the onset of the pandemic, which has now started to moderate. The pool's performance would remain exposed to the inherent credit risk in the asset class. Furthermore, macroeconomic shocks/business disruptions/natural calamities that may impact the income-generating capability of the borrower could have a bearing on the performance, given the marginal borrower profile.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after taking into account the performance of the originator's portfolio as well as the characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool of contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 5.00-6.00% of the initial pool principal, with certain variability around it. The prepayment rate for the underlying pool is estimated at 2.4-9.0% (with a mean of 6.0%) per annum.

Liquidity position: Strong

As per the transaction structure, only the interest amount is promised to the PTC Series A1 holders on a monthly basis while the entire principal amount is promised on the scheduled maturity date of the transaction. The collections from the pool and the available credit enhancement are expected to be comfortable to meet the promised payouts to the PTC investors.

Rating sensitivities

Positive factors – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade.

Negative factors – The sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

About the company

Satin Creditcare Network Ltd. (Satin), which was set up in 1990 to provide individual business loans to urban shopkeepers, started providing group lending services to the rural poor in 2008. It was registered with the Reserve Bank of India (RBI) as a deposit-taking non-banking financial company (NBFC) under the name, Satin Leasing and Finance Company Limited. Following its conversion into a public limited company in 1994, the company was renamed Satin Creditcare Network Ltd. in 2000. It stopped accepting public deposits from November 2004 and the RBI changed its classification to Category B (nondeposit taking) from Category A (deposit taking) in February 2009 and converted it into an NBFC-microfinance institution (NBFC-MFI) in November 2013. The company's microfinance operations are based on the Grameen Bank joint liability group (JLG) model and were spread across 1,039 branches in the country, as on September 30, 2022, on a standalone basis and 1,237 branches for the Group as a whole.

Satin is listed on the National Stock Exchange of India Limited (NSE), Bombay Stock Exchange (BSE) and Calcutta Stock Exchange. As on September 30, 2022, the company's consolidated managed portfolio stood at Rs. 7,575 crore. It reported a net loss of Rs. 153 crore in H1 FY2023 against a net profit of Rs. 21 crore in FY2022 at the consolidated level.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1 PTC	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: Click Here
