Cholamandalam Investment and Finance Company Limited: Ratings confirmed as final for PTCs issued under a vehicle loan receivables securitisation transaction

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
PLATINUM TRUST NOVEMBER 2022	PTC Series A	571.00	[ICRA]AAA(SO); provisional rating confirmed as final
	Second Loss Facility	21.41	[ICRA]BBB+(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

In December 2022, ICRA had assigned Provisional [ICRA]AAA(SO) rating to Pass-Through Certificates (PTCs) Series A and Provisional [ICRA]BBB+(SO) rating to Second Loss Facility issued by PLATINUM TRUST NOVEMBER 2022. The PTCs are backed by a pool of Rs. 571.00-crore (pool principal; receivables of Rs. 696.48 crore) vehicle loan receivables originated by Cholamandalam Investment and Finance Company Limited (CFSP/Originator) {CIFCL; rated [ICRA]AA+ (Stable)}. Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said ratings have now been confirmed as final.

A summary of the pool performance after the March 2023 payouts is shown in the table below:

Parameter	PLATINUM TRUST NOVEMBER 2022
Months post securitisation	4
Pool amortisation	11.13%
PTC Series A amortisation	11.13%
Cumulative Prepayment rate	1.18%
Cumulative collection efficiency	98.13%
Loss-cum 0+ days past due (dpd)	7.29%
Loss cum 30+ dpd	0.36%
Loss cum 90+ dpd	0.03%
Cumulative cash collateral utilisation	0.00%

Key rating drivers

Credit strengths

- Established position in the vehicle finance market backed by its strong franchisee base and fairly diverse product portfolio.
- Availability of credit enhancement in the form of EIS and Cash Collateral (CC)
- Absence of delinquent contracts in the pool as on the cut-off date

Credit challenges

- Proportion of contracts with loan-to-value (LTV) ratio of more than 80% is high at ~74%
- Performance of the pool would remain exposed to macro-economic shocks / business disruptions, if any

Description of key rating drivers highlighted above

According to the transaction structure, the loan pool receivables have been assigned at par to the PTC investors. The monthly

cash flow schedule comprises promised interest payment to PTC Series A at the pre-determined interest rate on the principal outstanding and promised principal (100% of the pool principal billed). Any excess EIS after making payments to Series A PTCs will flow back to the originator on a monthly basis. Cash collateral will be used for shortfall in interest payment in any month and for shortfall in payment of the promised principal.

The first line of support for meeting the scheduled PTC payouts is the EIS of 8.02% in the structure. Further credit support is available through a CC of 6.75% of the initial pool principal amount (Rs. 38.54 crore). The CC has been split into First Loss Facility (FLF) amounting to Rs. 17.13 crore (3.00% of initial pool principal) and Second Loss Facility (SLF) amounting to Rs. 21.41 crore (3.75% of initial pool principal).

There are no overdues in the pool as on the cut-off date. The pool is characterised by contracts with weighted average seasoning of 9.7 months and is well diversified with low obligator concentration. The pool consists of new and used commercial vehicle (New CV; ~63% and Used CV; ~35%) and new and used multipurpose utility vehicle (New MUV; ~1% and Used MUV; ~0.10%) loan contracts. The pool has high share of contracts with loan-to-value (LTV) ratio of more than 80%. Further, performance of the pool would remain exposed to macro-economic shocks / business disruptions, if any.

Past rated pools: ICRA currently has ratings outstanding on nine PTC transactions. The performance of the eight live pools (which have completed more than three months post securitisation) remained healthy till the March 2023 payouts. Any CC utilisation in the past was fully topped up in subsequent months and there has been no CC utilisation in the past 12 months.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after taking into account the performance of the originator's portfolio as well as the characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 2.50% - 3.50% of the initial pool principal, with certain variability around it. The average prepayment rate for the underlying pool is estimated 12.0% p.a.

Liquidity position

Superior for PTC Series A

The liquidity of the rated transaction is expected to be superior, supported by the healthy collections expected from the pool of contracts and the presence of a credit collateral amounting to 6.75% of the pool principal amount. Even assuming a monthly collection efficiency of only 50% in the underlying pool contracts in a stress scenario, the credit collateral would cover the shortfalls in the scheduled PTC payouts for a period of five months.

Adequate for Second Loss Facility

There is first loss facility available in the transaction amounting to 3.00% of the pool principal amount along with EIS for top up of Second Loss facility if needed as per the defined waterfall mechanism.

Rating sensitivities

Positive factors – Not applicable for the PTC; the rating for the SLF can be upgraded on the sustained strong collection performance of the underlying pool contracts, resulting in an increase in the credit enhancement cover available for the SLF.

Negative factors – Pressure on the ratings could emerge due to sustained weak collection performance of the underlying pool (monthly collection efficiency of <90% on a sustained basis), leading to higher-than-expected delinquency levels and CE utilization levels.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity Indicator
PTC Series A	Moderately Complex
Second Loss Facility	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
