Shriram Finance Limited (erstwhile Shriram Transport Finance Company Limited): Ratings confirmed as final for PTCs and second loss facility backed by vehicle loan receivables issued by Sansar Trust March 2023

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Sansar Trust March 2023	PTC Series A1	405.56	[ICRA]AAA(SO); provisional rating confirmed as final
	PTC Series A2	173.81	[ICRA]AAA(SO); provisional rating confirmed as final
	Second Loss Facility	28.97	[ICRA]A-(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

In March 2023, ICRA had assigned provisional ratings to the pass-through certificates (PTCs) issued under a securitisation transaction originated by Shriram Finance Limited {SFL/originator (erstwhile Shriram Transport Finance Company Limited); rated [ICRA]AA+ (Stable)}. The PTCs are backed by a pool of Rs. 579.37-crore (pool principal; receivables of Rs. 738.83 crore) of vehicle loan receivables. Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said ratings have now been confirmed as final.

Key rating drivers

Credit strengths

- Proven track record in pre-owned commercial vehicle (CV) financing segment along with its well-established franchise
- Availability of Excess Interest Spread (EIS) and Credit Collateral (CC) in the transaction
- Low obligor concentration with the top 10 obligors accounting for only 0.8% of the overall pool principal amount
- Relatively lower IRR contracts in the pool, which are performing better in the overall portfolio

Credit challenges

- High share (i.e. ~51%) of contracts with original tenure greater than 48 months
- Performance of the pool would remain exposed to macro-economic shocks/business disruptions

Description of key rating drivers highlighted above

As per the transaction structure, the promised cash flow schedule for all the PTC series includes interest (including overdues) on a pro rata basis at the contracted yield and the entire principal on the final maturity date (April 20, 2028). During the tenure of the PTCs, the collections from the pool, after making the promised interest payouts to the PTCs, will be used to make the expected principal payouts to PTC Series A1. and subsequently, once PTC Series A1 is paid off, it will be used to make the expected principal payouts to PTC Series A2, though these principal payouts are not promised and any shortfall in making the expected principal payments to the PTCs would be carried forward to the subsequent payouts.

The loan pool receivables have been assigned at par to the PTC investors. The first line of support for meeting the scheduled PTC payouts is the EIS of 11.71% in the structure. Further credit support is available through a CC of 10.00% of the pool principal amount. The CC will be split into a first loss facility (FLF) and second loss facility (SLF) of 5.00% each of the initial pool principal,

amounting to Rs. 28.97 crore each. In the event of a shortfall in meeting the promised PTC payouts during any month, the Trustee will utilise the EIS first and then the CC to meet the shortfall.

There are no overdues in the pool as on the cut-off date. The pool is well diversified with low obligator concentration and a weighted average seasoning of 8.8 months. It comprises new and used CV (new CV: 6.7% and used CV: 64.0%), new and used passenger vehicle (new PV: 1.1% and used PV: 4.5%), new and used construction equipment (new CE: 0.9% and used CE: 4.0%) and new and used tractor (new tractors: 0.1% and used tractors: 18.7%) loan contracts. The pool has moderate geographical concentration with the top 3 states (Karnataka, Madhya Pradesh and Andhra Pradesh) contributing 36.0% to the initial pool principal amount. It also has a high share (50.8%) of contracts with an original tenure of more than 48 months. All the contracts in the pool have an IRR of 17% or less. Further, the pool's performance would remain exposed to macro-economic shocks/business disruptions.

Past rated pools: ICRA has rated over 50 pools so far, backed by new & used CV, new & used PV, new & used CE and tractor loans originated by SFL. Overall, the performance of all live pools (which have completed minimum two payouts) has remained healthy till the February 2023 payouts with good collections and loss-cum-180+ days past due (dpd) levels of sub-1.6% for all the pools.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after considering the performance of the originator's portfolio as well as the characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool of contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 3.50-4.50% of the initial pool principal, with certain variability around it. The prepayment rate for the underlying pool is estimated at 12.0-18.0% per annum.

Liquidity position

For PTC Series A1 and Series A2: Superior

As per the transaction structure, only the interest amount is promised to the PTC Series A1 and A2 holders on a monthly basis while the principal amount is promised on the scheduled maturity date of the transaction. The cash flows from the pool and the available credit enhancement are expected to be highly comfortable to meet the promised payouts to the PTC investors.

For SLF: Strong

The cash flows from the pool and the available FLF are comfortable for the top-up of the SLF, if needed, as per the defined waterfall mechanism.

Rating sensitivities

Positive factors – Not applicable for the PTCs; the rating for the SLF can be upgraded on the sustained strong collection performance of the underlying pool of contracts, resulting in an increase in the credit enhancement cover available for the SLF.

Negative factors – Pressure on the ratings could emerge due to the weakening collection performance of the underlying pool (monthly collection efficiency < 90% on a sustained basis).

Analytical approach

The rating action is based on the analysis of the performance of SFL's portfolio till December 2022, the key characteristics and composition of the current pool, the performance expected over the balance tenure of the pool, and the credit enhancement cover available in the transaction.

Complexity level of the rated instrument

Instrument	Complexity Indicator
PTC Series A1	Moderately Complex
PTC Series A2	Moderately Complex
Second Loss Facility	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
