Voltas Limited: Ratings reaffirmed for bank facilities and assigned for non-convertible debenture programme

Summary of rating action

Instrument*	Previous Rated Amount (Rs. crore)	Current Rated Amount (Rs. crore)	Rating Action
Long-term/ short-term fund/non-fund based limits	2,297.05	2,113.33	[ICRA]AA+(Stable)/[ICRA]A1+; reaffirmed
Long-term/ short-term unallocated	102.95	86.67	[ICRA]AA+(Stable)/ [ICRA]A1+; reaffirmed
Proposed non-convertible debentures	-	500.00	[ICRA]AA+(Stable); assigned
Total	2,400.00	2,700.00	

*Instrument details are provided in Annexure-I

Rationale

The rating action on Voltas Limited (Voltas) considers its strong credit profile and expectation that the profile will remain stable going forward on the back of its diversified business risk profile with presence across its consumer and project businesses (both domestic and international projects). Being a part of the Tata Group, Voltas continues to enjoy strong financial flexibility and is complemented by professional management and strong financial policies. The ratings remain underpinned by Voltas' leadership position in the unitary cooling products business, strong execution track record in the projects business, robust financial profile marked by large scale of operations, strong return and debt protection metrics, and a superior liquidity position.

The ratings, however, remained constrained by the company's exposure to challenges in the project business, primarily in the international market, wherein it has witnessed challenges in terms of delay in certifications, slow collections, leading to higher provisioning in FY2023 and Q1 FY2024, thereby reporting losses for the segment. The company also faced challenges related to encashment of bank guarantees for two of the overseas projects in FY2023, of which one was on account of condition of contract termination and thereby invocation of back-to-back from customer to main contractor (owing to certain performance issue) and in turn main contractor terminated Voltas' contract and invoked the BG and in the second encashment case although the project was executed and was under defect liability period (DLP), the main contractor has unilaterally invoked Voltas' BG, these encashment impacted the net profitability at entity level. Given the superior liquidity levels, the entity was able to manage these payouts and is expected to absorb any such externalities which may come up, in the near term. The company, hence, is relooking at its strategies related to risk management especially at international projects level and is expected to be further diligent, add more conditions in contract and the guarantee's and paving way for more cautious deal while taking up new projects. The domestic business also remains exposed to vagaries of project management risks in terms of site hand-over and delay in certification, although considering that the company mainly deals with Government customers, there is no delinquency risk.

The ratings also factor in the seasonality and reliance of the unitary products business group (UPBG) to climatic conditions, primarily the intensity of summers along with stiff competition from several other established players in the field. Voltas' market share declined to 20.6% towards the end of June 2023 compared to 24.1% towards the end of June 2022, owing to competition and aggressive pricing by competitors; however, the company continues to maintain its market leadership position in room air conditioners (AC).

In FY2023, Voltas reported 19.7% revenue growth on the back of the unitary segment. The unitary segment witnessed 33% YoY growth in FY2023, while the EMPS segment decline by 2.7% amid a low carry-forward order book, completion stage of

major projects and the company's cautionary approach towards fresh orders. In Q1 FY2024, the company reported healthy revenue growth (21% YoY and 14% QoQ), driven by healthy sales from its unitary segment, EMPS and the Engineering Products Business Group (EPBG) segment.

The operating margins declined to 6.0% in FY2023 over 8.6% in FY2022, affected by intense competition and aggressive pricing by the competitors in unitary segment and provisions owing to delayed receivables in international project business. The operating margins contracted in Q1 FY2024 to 5.5% (against 6.4% in Q1 FY2023) due to delayed certification and collections, primarily in overseas projects. The margin in the near term shall remain exposed to competition in the company's unitary cooling business as well as to challenges faced in select projects and consequent provisions.

The Stable outlook reflects the company's leadership position in the room AC segment along with consistent cash accruals and superior liquidity levels, and strong order book position, which will continue to support its robust credit profile in the medium to long term.

Key rating drivers and their description

Credit strengths

Financial flexibility by being part of the Tata Group – Voltas is a part of the Tata Group, which holds a 30.30% stake in the company. Being part of the Tata Group provides it with considerable financial flexibility in accessing financial markets and the banking system, in case of any funding requirements.

Diversified revenue streams with significant contribution from EMPS and UPBG segments – Voltas is present in the mechanical, electrical and plumbing (MEP), as well as in the heating, ventilation and air conditioning (HVAC) segments in the domestic and overseas (mainly West Asian) markets, in addition to the AC business in the domestic market. These two businesses account for ~94% of Voltas' revenues. However, its revenues are fairly diversified in each of these segments in terms of geographies served and products/services offered. Through its EPBG segment, Voltas operates as an authorised distributor in the textile machinery (domestic) market as well as in the mining and construction equipment (domestic and Mozambique) markets. The EPBG segment accounted for ~6% of its revenues in FY2023 and it has contributed strongly in the profits for the company.

Strong market presence in room and commercial AC business – The company has a dominant market position across the country in room ACs, with presence in both window and split ACs. This has aided the UPBG division and increased its market share over the years. However, the company had witnessed a decline in its market share to 20.6% towards the end of June 2023 compared to 24.1% towards the end of June 2022, owing to stiff competition and aggressive pricing by competitors. However, Voltas continues to maintain its market leadership position in room air conditioners (RAC) driven by its healthy tie ups with dealers/ distributors, modern trade and organised channels, growing network of exclusive brand outlets, over 25000 touch points focused customer-centric approach and consumer trust in its brand.

Extensive presence and strong market position in West Asian markets – Voltas has a well-established market position in the project business and is well poised to benefit from any growth in fresh order flow in its target markets in the long term. The domestic order booking is stronger, driven by healthy orders from water management projects, rural electrification and urban infrastructure sectors. While the order bookings in the overseas markets remained healthy in FY2023 and Q1 FY2024, they are expected to remain moderate in the near term due to a cautious approach in order picking.

Strong financial risk profile as reflected in low gearing levels, superior liquidity profile and strong debt protection metrics – Voltas had a strong capital structure reflected in its gearing of 0.1 times and Total Debt/OPBDITA of 1.1 times as on March 31, 2023. It also had a superior liquidity position evident from its cash and bank balances as well as liquid investments (including non-current MF investments) worth Rs. 3,715 crore as on March 31, 2023. ICRA notes that on a consolidated basis, Voltas has a planned capex of ~Rs. 500 crore for PLI scheme, capacity expansion in the AC and refrigeration segment over the next 12-15

months. The debt protection metrics also continue to be at strong levels, with interest coverage at 19.4 times and DSCR at 8.2 times as of FY2023.

Credit challenges

Project business exposed to time and cost overruns along with competition from established players; margin pressure in project business as reflected in losses in FY2023 and Q1 FY2024 – The company's EMPS business remains exposed to time and cost overruns with a longer gestation period for most of its orders in the project business. The tenure for international and domestic projects generally ranges from two to three years. The company continues to face competition from established players in the project business. The company remains cautious in picking up the right projects by following requisite credit check and other risk procedures to avoid any concerns on delay and liquidity issues in the project business. The margin in the segment remains under pressure as reflected in the company's EBIT losses of -12.6% (including provisions) in FY2023 and -7.6% in Q1 FY2023, owing to delay in certifications and slow collections resulting in provisions, following prudent and conservative policy. The segment has also faced challenges related to BG invocations, in FY2023. The company is relooking at risk management strategies related to bidding for projects especially in the international area and is expected to refine and be much more judicious in client selection, going forward.

Ability to turn around and profitably scale-up newer appliances business under the VoltBek JV remain critical for product and earnings diversification – Voltas has a JV with Arçelik (European consumer brand), namely Voltbek Home Appliances Private Limited, for manufacturing appliances like refrigerators, washing machines, dishwashers, etc. from its Sanand factory (Gujarat), which has a production capacity of one million units per annum for refrigerator. At present, the JV is loss making, and the losses increased to Rs. 250.7 crore in FY2023 over Rs. 222.3 crore in FY2022. Although the JV reported a revenue growth of 16% indicating that per unit loss has reduced from FY2022 to FY2023. In Q1 FY2024, JV reported significant volume growth of 50% on a Y-o-Y basis, further indicating towards lower per unit loss and thereby the company targets to achieve EBITDA level break-even by the year FY2025. Also, ability of the company to turn around the business, along with profitably scaling up the segment, remains critical for product and earnings diversification. Voltas provided financial support of Rs. 122.5 crore in FY2023 and is expected to provide further support to fund its losses and capex requirement.

UPBG segment susceptible to climatic vagaries, changing technologies and intense competition – While Voltas continues its leadership position in the ACs (window and split ACs) segment, the same remains susceptible to climatic vagaries. The unitary segment has witnessed a healthy growth in FY2023 and Q1 FY2024, on the back of healthy demand for cooling products. With stiff competition among the RAC players, the segment remains susceptible to pricing pressures in the near term, reflected in the dip in EBIT margins to 8.3% in FY2023 and 8.2% in Q1 FY2024 against 10.5% in FY2022. The ability of the company to maintain acceptable margin levels and its leadership position, remain key monitorables for this division.

Environmental and Social Risks

Environmental considerations: The company is exposed to risks such as harmful emissions that have a negative impact on the environment and risk of ozone depletion. However, the company has optimised the design of the Acs, resulting in reduced copper consumption and refrigerant gas usage. The company is using refrigerants like R32 in air conditioners, which have zero ozone depleting potential and have introduced hydrocarbon (R290) refrigerants in commercial refrigeration freezers. It is also taking various initiatives for cutting down its carbon footprint. The company is working towards renewable energy, energy efficiency and clean technology.

Social considerations: Voltas is exposed to social risks such as compliance with health and safety standards along with evolving consumer lifestyle changes. However, there is a comprehensive Safety-Health-Environment (S-H-E) policy in place at Voltas. Based on the community needs assessment exercise, the company has built a framework, which includes three thrust areas: (a) sustainable livelihood, (b) community development and (c) issues of national importance. These three thrust areas include projects aimed at skilling and employability building of marginalised youth and women; water resource development and sustainable agriculture; and sanitation, hygiene and solid waste management interventions for the marginalised and vulnerable communities.

Liquidity position: Superior

The company's liquidity position remains superior, given the positive free cash flow generation since FY2013, supported by the performance of the UPBG division and judicious capital expenditure (capex) spend. Lower borrowings resulted in low interest expenses, which in turn supported its cash flows. The company had sizeable cash balances and liquid investments (including non-current MF investment) of Rs. 3,715 crore as on March 31, 2023 over a consolidated total debt of Rs. 650.6 crore (including lease liabilities of Rs. 45.0 crore), indicating a superior liquidity. In addition, the company has sizeable fund-based facilities, which are sparingly utilised. The company's capex plan of ~Rs. 500 crore for the next 12-15 months.

Rating sensitivities

Positive factors – ICRA could upgrade Voltas' ratings, if the company demonstrates sustained improvement in its revenues and profitability, coupled with its ability to achieve business diversity, while maintaining its leading position in the UPBG segment and improving its new appliances business. The ability to improve its margins in the EMPS segment on a sustained basis, while maintaining a favourable working capital cycle along with superior liquidity, will qualify for a rating upgrade.

Negative factors – Pressure on Voltas' ratings can arise with sharp contraction in earnings and liquidity on a sustained basis. Any large debt-funded capex or inorganic acquisitions leading to material impact on the debt indicators can also be a trigger for a rating downgrade.

Analytical approach

Analytical Approach	Comments
Applicable rating methodologies	Corporate Credit Rating Methodology
Parent/Group support	Not Applicable
Consolidation/Standalone	For arriving at the ratings, ICRA has considered the consolidated financials of Voltas. As on March 31, 2023, the company had nine subsidiaries, four joint ventures and one associate company, which are all listed in Annexure-2.

About the company

Voltas Limited is a part of the Tata Group, which holds a 30.30% stake in the company. Voltas operates in three main business segments—UPBG, EMPS and EPBG. The UPBG business markets ACs, air coolers, water coolers and other commercial refrigeration products and is also present in the market of centralised air-conditioning and refrigeration. The EMPS business provides engineering solutions for MEP projects, HVAC applications, water management services, electrification and solar jobs in domestic and overseas markets. The EPBG business markets and trades in mining and construction equipment as well as textile machinery, besides providing after-sales services.

Unallocated	Not applicable
Proposed Non-convertible debentures	Very Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
