## Five-Star Business Finance Limited: Rating confirmed as final for PTCs backed by small business loan receivables

### Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Dhruva XVIII 09 2023	PTC Series A1	351.89	[ICRA]AAA(SO); provisional rating confirmed as final

\*Instrument details are provided in Annexure I

### Rationale

In September 2023, ICRA had assigned Provisional [ICRA]AAA(SO) rating to pass-through certificate (PTC) Series A1 issued under a securitisation transaction originated by Five-Star Business Finance Limited {FSBFL/originator; rated [ICRA]AA-(Stable)}. The PTCs are backed by a pool of Rs. 402.16-crore (principal amount; receivables of Rs. 745.70 crore) small business loan receivables originated by FSBFL. Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

### Key rating drivers

#### Credit strengths

- Availability of credit enhancement (CE) in the form of excess interest spread (EIS), principal subordination and cash collateral (CC)
- No overdue contracts as on the cut-off date
- Average seasoning of ~16 months and average pre-securitisation amortisation of ~11% as on the cut-off date

#### Credit challenges

- High geographical concentration with top 3 states contributing ~86% to the initial pool principal as on the cut-off date
- Performance of the pool would remain exposed to macro-economic shocks/business disruptions/natural calamities that may impact the income-generating capability of the borrower

### Description of key rating drivers highlighted above

According to the transaction structure, the loan pool receivables are assigned at par to the PTC investors. During the tenure of PTC Series A1, the collections from the pool, after making the promised interest payouts to PTC Series A1, will be used to make the expected principal payouts to PTC Series A1. The principal payout is not promised and any shortfall in making the expected principal payment to PTC Series A1 would be carried forward to the subsequent payout. The surplus EIS available after meeting the promised and expected payouts to the PTCs will be passed on to the originator every month.

Support for PTC Series A1 in the transaction is in the form of a principal subordination of 12.5% of the initial pool principal and an EIS of 59.8% of the initial pool principal. A CC of 5.0% of the initial pool principal (Rs. 20.11 crore), provided by FSBFL, acts as further CE in the transaction. In the event of a shortfall in meeting the promised PTC payouts during any month, the Trustee will utilise the CC (in case the principal subordination and EIS are insufficient) to meet the same.

There were no overdues in the pool as on the cut-off date. The weighted average seasoning of the pool was 15.8 months<sup>1</sup> with pre-securitisation amortisation of 10.7% as on the cut-off date. The pool had high geographical concentration with the top 3

<sup>1</sup> Basis number of instalments as shared by the originator

states (Tamil Nadu, Andhra Pradesh and Telangana) contributing 85.6% to the initial pool principal amount. At the district level, the top district accounted for 6.0% of the initial pool principal amount while the top 10 districts accounted for 27.3%. The performance of the pool would remain exposed to macro-economic shocks/business disruptions/natural calamities, which may impact the income-generating capability of the borrower.

**Past rated pool performance:** ICRA has rated 21 securitisation transactions with the underlying receivables originated by FSBFL, of which 14 are live as of the August 2023 payout month. All live transactions that have completed at least one payout have reported healthy cumulative collection efficiency of more than 98% and loss-cum-90+ days past due (dpd) of less than 1%, post the August 2023 payout, with no CC utilisation.

### Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the balance tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after taking into account the past performance of the originator's portfolio and the rated pools as well as the performance and characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool of contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 4.0-5.0%, with certain variability around it. The average prepayment rate for the underlying pool is estimated at 18.0% per annum.

### Liquidity position: Superior

As per the transaction structure, only the interest amount is promised to the PTC holders on a monthly basis while the principal amount is promised on the scheduled maturity date of the transaction. The collections from the pool and the available CE are expected to be highly comfortable to meet the promised payouts to the PTC investors.

### Rating sensitivities

**Positive factors** – Not applicable

**Negative factors** – The sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher CE utilisation levels, would result in a rating downgrade.

### Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

### Complexity level of the rated instrument

Instrument	Complexity Indicator
PTC Series A1	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
