Protium Finance Limited: [ICRA]AA+(SO) confirmed as final for PTCs backed by secured MSME loan (LAP) receivables issued by Turiya LAP - 2401

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Turiya LAP – 2401	Series A1 PTCs	29.49	[ICRA]AA+(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

In January 2024, ICRA had assigned Provisional [ICRA]AA+(SO) rating to Series A1 PTCs issued under a securitisation transaction originated by Protium Finance Limited. The pass-through certificates (PTCs) are backed by a pool of Rs. 53.59-crore secured micro, small and medium enterprise (MSME) loan against property (LAP) receivables (underlying pool principal of Rs. 31.04 crore). Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said ratings have now been confirmed as final.

A summary of the performance of the pool after the February 2024 payout month has been provided below.

Parameter	Turiya LAP – 2401
Months post securitisation	2
Pool amortisation	4.0%
Series A1 PTC amortisation	5.7%
Cumulative collection efficiency	99.9%
Loss-cum-0+ dpd	0.0%
Loss cum 30+ dpd	0.0%
Loss cum 90+ dpd	0.0%
Cumulative Prepayment rate	3.2%
Cumulative cash collateral utilisation	0.0%

Key rating drivers

Credit strengths

- Availability of CE in the form of CC, EIS and subordination
- No overdue contracts in the pool as on the cut-off date
- Almost 79% of the contracts have a credit bureau score of atleast 700 as on the cut-off date

Credit challenges

- Moderate geographical concentration with top 3 states accounting for ~60% of the initial pool principal
- The yield on Series A1 PTCs is fixed and the pool yield is floating, linked to the originator's benchmark rate. Hence, the transaction is exposed to interest rate risk and any adverse movement in the benchmark yield is likely to reduce the EIS available in the transaction
- Limited vintage has been observed since majority of the book building has happened in the last three years
- Performance of the pool would remain exposed to macro-economic shocks/business disruptions

Description of key rating drivers highlighted above

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payment to Series A1 PTCs at the predetermined interest rate on the principal outstanding. The principal repayment to Series A1 PTCs is promised on the last payout date. During the tenure of Series A1 PTCs, the collections from the pool, after making the promised interest payouts, will be used to make the expected principal payouts to Series A1 PTCs. This principal payout is not promised and any shortfall in making the expected principal payment to Series A1 PTCs would be carried forward to the subsequent payout. The surplus EIS available after meeting the promised and expected payouts to the PTCs will be used towards the accelerated redemption of Series A1 PTCs. Also, in the event of a shortfall in meeting the promised PTC payouts during any month, the trustee will utilise the CC to meet the same.

The first line of support for Series A1 PTCs in the transaction is in the form of a subordination of 5.00% of the pool principal. Further credit support is available in the form of an EIS of 57.50% and a CC of 8.00% of the pool principal (i.e. Rs. 2.48 crore) provided by Protium.

The underlying loans follow a monthly payment schedule. There were no overdues in the pool as on the cut-off date and none of the loans in the pool have been delinquent in the past. The average pre-securitisation amortisation stood at ~8% as on the cut-off date. Further, ~79% of the contracts in the pool had a CIBIL score of more than 700. The pool had moderate geographical concentration with the top 3 states (Tamil Nadu, Karnataka and Gujarat) contributing ~60% to the initial pool principal amount. The interest rate for the contracts in the pool is floating while the PTC yield is fixed, thereby creating an interest rate risk in the structure. The pool's performance would remain exposed to any macro-economic shocks/business disruptions.

Past rated pools' performance: Till date ICRA has rated four securitisation transactions backed by pool of secured loan receivables originated by PFL. All the pools have show healthy collection performance as of February 2024 payout month with cumulative collection efficiency above 99% and nil CC utilisation.

Key rating assumptions

ICRA's cash flow modelling for rating asset-backed securitisation (ABS) transactions involves the simulation of potential delinquencies, losses (shortfall in principal collection during the balance tenor of the pool) and prepayments in the pool. The assumptions for the loss and coefficient of variation (CoV) are arrived at after taking into account the past performance of the originator's portfolio as well as the performance and characteristics of the specific pool being evaluated. Additionally, the assumptions may be adjusted to factor in the current operating environment and any industry-specific factors that ICRA believes could impact the performance of the underlying pool of contracts.

After making these adjustments, the expected mean shortfall in principal collection during the tenure of the pool is estimated at 4.75-5.75%, with certain variability around it. The prepayment rate for the underlying pool is estimated in the range of 6.0-20.0% per annum with a mean of 16.0%.

Liquidity position: Superior

The liquidity for Series A1 PTCs is superior after factoring in the credit enhancement available to meet the promised payout to the investor. The total credit enhancement would be more than 10 times the estimated loss in the pool.

Rating sensitivities

Positive factors – The sustained strong collection performance of the underlying pool (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels and lower CE utilisation levels, would result in a rating upgrade.

Negative factors – The sustained weak collection performance of the underlying pool of contracts (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher CE utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1 PTCs	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
