Total	664.77	1,094.77			

^{*}Instrument details are provided in Annexure I

Rationale

The ratings factor in the improvement in NeoGrowth Credit Private Limited's (NeoGrowth) profitability and the increase in its scale of operations. The company's assets under management (AUM) increased by 51% YoY to Rs. 2,456 crore as of December 31, 2023 from Rs. 1,630 crore as of December 31, 2022. The growth was supported by the equity raise of Rs. 210 crore from the existing and new investors in FY2023. Driven by the improved scale, the profitability also improved with a return on managed assets (RoMA) of 2.7% (annualised) in 9M FY2024 compared to losses in FY2021 and FY2022 and the moderate profit of 0.8% in FY2023. The improvement in the profitability was also supported by lower interest income reversals and the decline in credit costs as the asset quality was previously affected by the Covid-19 pandemic.

The ratings also take into consideration NeoGrowth's adequate capital profile, supported by frequent capital raising. It reported a net worth of Rs. 636 crore with a managed gearing of 3.1x as on December 31, 2023 (2.8x as on March 31, 2023). Given the planned AUM growth of ~35-40%, the company is likely to require capital in the next 12-18 months while maintaining a managed gearing of ~4x. It continues to have a relatively diverse set of lenders, including overseas lenders, development finance institutions, alternative investment funds and multilateral agencies in addition to loans from non-banking financial companies (NBFCs) and banks. ICRA also takes comfort from the management team's long-standing experience and domain expertise in the retail/small and medium-sized enterprise (SME) lending business.

The ratings, however, remain constrained by the inherent risk associated with unsecured lending and the moderate borrower profile. While the company's focus on the largely untapped small and medium-sized retailer segment is likely to support the yield on assets, its profitability and capitalisation will remain vulnerable to asset quality shocks, given the unsecured nature of the assets.

The Stable outlook is driven by ICRA's expectation that NeoGrowth will continue to grow its scale of operations with an improvement in the profitability. Moreover, ICRA expects the managed gearing to be maintained below 4.0x, supported by capital infusions as demonstrated in the past.

ICRA has simultaneously reaffirmed and withdrawn the long-term rating outstanding on the Rs. 35-crore non-convertible debentures (NCDs) as the instruments have been fully repaid. The rating has been withdrawn in accordance with ICRA's policy on the withdrawal of credit ratings.

Key rating drivers and their description

Credit strengths

Adequate capitalisation supported by equity raise – The company's capitalisation remains adequate with a net worth of Rs. 636 crore and a managed gearing of 3.1 times as of December 31, 2023. This has been supported by frequent capital raising. NeoGrowth had raised compulsory convertible debentures (CCDs) of Rs. 66.2 crore in September 2021 and Rs. 50 crore in June 2022 (largely converted to compulsory convertible preference shares (CCPS) in Q3 FY2023). It raised equity of Rs. 160 crore in December 2022 from FMO, the Dutch entrepreneurial development bank. While NeoGrowth's profitability has improved, its borrowings are expected to increase with its growth plans. ICRA expects the company to raise capital to meet its growth plans while ensuring that the managed gearing remains below 4x.

Improving profitability – NeoGrowth's earnings profile improved in 9M FY2024 with the company reporting a profit after tax (PAT) of Rs. 50 crore (RoMA of 2.7%) compared to a PAT of Rs. 17 crore in FY2023 (RoMA of 0.8%). The profitability was adversely impacted in FY2021, FY2022 and FY2023 by the high credit costs and lower net interest margins (NIMs) due to the reversal of interest income on write-offs and stage 3 assets amid the pandemic. The improvement in the profitability in 9M FY2024 was supported by higher NIMs, given the lower reversal of interest income with reduced write-offs, and improved operating efficiency with the growth in the loan book. With the growth in the AUM, the profitability is expected to improve further, provided the company is able to contain its credit costs.

Credit challenges

Moderate borrower profile – The company provides unsecured business loans (working capital financing) with an average ticket size of ~Rs. 14 lakh to small and medium-sized retailers; the repayments are largely linked to the daily sales collections (accounting for ~63% of the loan book as on December 31, 2023). The balance portfolio comprises supply chain financing to micro, small, and medium enterprises (MSMEs) with an average ticket size of Rs. 23 lakh. ICRA notes the inherent risk in the portfolio due to the moderate credit profile of the borrowers, who are highly vulnerable to downturns in economic cycles. Further, a large part of the AUM (98%) represents unsecured lending, impeding recoveries from the harder delinquency buckets.

NeoGrowth's asset quality deteriorated in FY2021 and FY2022 due to the impact of the pandemic. The gross and net non-performing advances (NPAs) improved to 4.3% and 2.3%, respectively, as on March 31, 2023, supported by high write-offs. As the company had largely provided for the Covid-impacted portfolio by March 31, 2023, the gross and net NPAs improved further to 3.6% and 1.5%, respectively, as on December 31, 2023. Including annualised write-offs in 9M FY2024, the gross NPA stood at 8.0% as on December 31, 2023 (14.2% as on March 31, 2023). The existing AUM almost entirely comprises the book originated after the pandemic. The ability to maintain the asset quality and contain the credit costs would remain key for improving the profitability.

Liquidity position: Adequate

NeoGrowth has repayment obligations of Rs. 993 crore (principal + interest) for the 6-month period till September 2024. As on March 31, 2024, it had Rs. 167 crore of cash and liquid investments and unutilised bank lines of Rs. 17 crore. Liquidity is supported by inflows from the loan book and the company did not have any cumulative mismatches in the less-than-1-year tenor in the structural liquidity statement (SLS) as of December 31, 2023.

Rating sensitivities

Positive factors – The ratings could be upgraded if the company shows a significant improvement in its scale of operations along with a consistent improvement in the profitability.

www.icra .in Page

Negative factors – Pressure on the ratings could arise if there is a sustained and significant deterioration in the asset quality and earnings profile and a continued increase in the managed gearing to more than 4x.

About the company

NeoGrowth Credit Private Limited, which commenced operations in FY2013, is a non-deposit taking systemically important non-banking financial company (NBFC) providing loans to SMEs. The company was founded by Mr. Dhruv Khaitan and Mr. Piyush Khaitan, and its investors include ON Mauritius, Aspada Investment Advisors, Khosla Impact Fund, Frontier Investments Group (Accion), Trinity Inclusion Ltd. (Leapfrog), Mr. Arun Nayyar (Managing Director (MD) & Chief Executive Officer (CEO)), IIFL Seed Ventures Fund and FMO (the Dutch entrepreneurial development bank). Before setting up NeoGrowth, the founders had established and managed Venture Infotek, which provided end-to-end card payment processing solutions to banks that issue credit cards and with whom merchants have point of sales terminals.

Any other information:

NeoGrowth faces prepayment risk, given the possibility of debt acceleration upon the breach of covenants, including financial, operating and rating-linked covenants. Upon failure to meet the covenants, if the company is unable to get waivers from the lenders/investors or the lenders/investors do not provide it with adequate time to arrange for alternative funding to pay off the accelerated loans, the ratings would face pressure.

Complexity level of the rated instruments

Instrument	Complexity Indicator
Non-convertible debenture	Very Simple
Commercial paper programme	Very Simple
Long-term fund-based bank lines	Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: Click Here
