NeoGrowth Credit Private Limited: Rating confirmed as final for PTCs backed by MSME business loan receivables issued by Nagarjuna-1 Trust March 2024

Summary of rating action

Trust Name	Instrument*	Current Rated Amount (Rs. crore)	Rating Action
Nagarjuna-1 Trust March 2024	Series A1 PTC	62.01	[ICRA]A+(SO); provisional rating confirmed as final

*Instrument details are provided in Annexure I

Rationale

ICRA had assigned a provisional rating to the Series A1 Pass-Through Certificates (PTCs) issued by Nagarjuna-1 Trust March 2024 under a securitisation transaction originated by NeoGrowth Credit Private Limited {NCPL/Originator; rated [ICRA]BBB+ (Stable)}. The PTCs are backed by a pool of micro, small and medium enterprise (MSME) business loan receivables with an aggregate principal outstanding of Rs. 72.95-crore (pool receivables of Rs. 91.37-crore).

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

Pool performance summary

Parameter	Nagarjuna-1 Trust March 2024
Payout month	May 2024
Months post securitisation	2
Pool amortisation	14.31%
Series A1 PTC amortisation	16.85%
Average prepayment rate	2.76%
Cumulative collection efficiency ¹	91.90%
Loss-cum 0+ days past due (dpd) ²	8.10%
Loss cum 30+ dpd ³	1.33%
Loss cum 90+ dpd ⁴	0.00%
Cumulative cash collateral utilisation	0.00%

Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout. The principal is expected to be paid on a monthly basis (100% of the pool principal billed) but is promised on the final maturity date. Any surplus excess interest spread (EIS), after meeting the promised and expected payouts, will flow back to the Originator on a monthly basis. Any prepayment in the pool would be used for the prepayment of Series A1 PTC principal.

¹ Cumulative collections/ (Cumulative billings + Opening overdues at the time of securitisation)

² Principal outstanding on contracts aged 0+ dpd / Principal outstanding on the pool at the time of securitisation

³ Principal outstanding on contracts aged 30+ dpd / Principal outstanding on the pool at the time of securitisation

⁴ Principal outstanding on contracts aged 90+ dpd / Principal outstanding on the pool at the time of securitisation

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 4.00% of the initial pool principal, provided by the Originator, (ii) subordination of 15.00% of the initial pool principal for Series A1 PTC, and (iii) EIS of 18.21% of the initial pool principal for Series A1 PTC

Key rating drivers and their description

Credit strengths

Granular pool supported by presence of credit enhancement – The pool is granular, consisting of 521 contracts, with no contract exceeding 1.00% of the pool principal (or top 10 contracts forming only ~8.5% of the pool principal), thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, subordination and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

Healthy bureau score of borrowers – In the pool, 100% of the borrowers (in terms of the principal amount outstanding on the cut-off date) have a CIBIL score of 700 and above, which reflects their relatively better credit profile.

Seasoned contracts in the pool – The pool has amortised by almost ~14% as on the cut-off date with no delinquencies seen in any of the contracts, post loan disbursement, thereby reflecting the borrowers' relatively better credit profile

Credit challenges

High geographical concentration – The pool has high geographical concentration with the top 3 states, viz. Karnataka, Adhra Pradesh and Maharashtra, contributing 64% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc.

Risks associated with lending business – Exposed to inherent credit risk associated with the unsecured nature of the underlying asset class; performance of the pool would remain exposed to macro-economic shocks / business disruptions, if any.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 6.25%, with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 4.8% to 18% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

Liquidity position: Strong

The liquidity for Series A1 PTC is strong after factoring in the CE available to meet the promised payouts to the investor. The total CE would be 4.50 times the estimated loss in the pool.

Rating sensitivities

Positive factors – The rating could be upgraded on the sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and on an increase in the cover available for future investor payouts from the credit enhancement.

Negative factors – The rating could be downgraded on the sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and credit enhancement utilisation levels. Weakening in the credit profile of the servicer could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity Indicator
Series A1 PTC	Moderately Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
