Aditya Birla Renewables Solar Limited: Rating reaffirmed

Summary of rating action

Instrument*	Previous Rated Amount (Rs. crore)	Current Rated Amount (Rs. crore)	Rating Action
Term loan	127.74	127.74	[ICRA]AA (Stable); reaffirmed
Total	127.74	127.74	

*Instrument details are provided in Annexure-1

Rationale

The reaffirmation of the rating for Aditya Birla Renewables Solar Limited (ABReSL) factors in the company's strong parentage as a part of the Aditya Birla Group (ABG). ABReSL is a subsidiary of Aditya Birla Renewables Limited (ABReL), which is, in turn, 100% held by Grasim Industries Limited (GIL; rated [ICRA]AAA (Stable)/ [ICRA]A1+), ABG's flagship company. The Group has an operational renewable (RE) power capacity of ~1.05 GW (including ~0.15 GW housed under another promoter entity but managed by ABReL), assets under construction of ~1 GW and assets under development of ~1.4 GW, with large plans to grow the RE platform, going forward. ABReSL benefits on the financial, operational and managerial front because of its strong parentage.

ICRA positively factors in the presence of long-term power purchase agreements (PPA) with Hindalco Industries Limited (HIL) under the captive mode for the entire 142.3-MW (DC) capacity, including 121.2-MW operational solar assets and the 21.1-MW under-construction capacity of ABReSL. The tariff rates offered by ABReSL remain highly competitive against the grid tariffs and would enable HIL to meet its renewable purchase obligation (RPO)/sustainability targets. ICRA also takes note of HIL's strong credit profile and timely track record of payments. Further, ICRA factors in the competitive cost of debt and the long tenure of debt availed by ABReSL, which is likely to result in adequate debt coverage metrics for the company.

The rating, however, is constrained by the under-construction status for 21.1-MW capacity under ABReSL and the limited track record of generation as 72 MW capacity has been commissioned in FY2024. The rating is also constrained by the vulnerability of the company's cash flows and debt protection metrics to its generation performance. Any adverse variation in weather conditions and module performance may impact the PLF levels and consequently affect its cash flows, given that the PPA tariff is single part in nature. The performance of the operational assets has been lower than estimated levels mainly due to soiling issues at some of the sites, lower irradiation in FY2024 and interruptions at some of the sites due to storms. Going forward, the demonstration of generation performance in line or above the appraised estimate remains important to achieve the desired return metrics. Given the debt equity mix of 80:20 for the projects, ABReSL is expected to have a leveraged capital structure and the debt coverage metrics would remain exposed to adverse interest rate movements.

The Stable outlook assigned to the long-term rating factors in the steady cash flow visibility, aided by the long-term PPA and timely collections expected from the customer along with the benefits of being part of ABG.

Key rating drivers and their description

Credit strengths

Strong financial, operational and managerial support as part of Aditya Birla Group – ABReSL is a subsidiary of ABReL, which is a 100% subsidiary of GIL, ABG's flagship entity. The Group has an operational solar power portfolio of ~1.05 GW (including ~0.15 GW housed under another promoter entity but managed by ABReL), with assets under construction of ~1 GW and assets under development of ~1.4 GW. It is focused on increasing its presence in the renewable energy segment, with large growth

plans. GIL has significant control over the operations of the renewable arm. With significant portion of the operational capacity procured by the Group entities and common centralised resources, the linkages between GIL and ABReL are very strong. The Group remains committed to providing need-based support to ABReL's assets. ABReL also benefits on account of the strong financial flexibility of ABG, reflected in the cost-competitive rate of funding for its various projects.

Revenue visibility from long-term PPA with HIL; superior tariff competitiveness – ABReSL has signed PPAs with HIL for 22 years for the 100.2-MW capacity. The weighted average tariff for the full capacity stands at Rs. 3.1 per unit, with escalation available for the 49.2-MW operating capacity. The tariff is fixed for the entire PPA tenure for the 51.0-MW hybrid project and 32.7-MW Belgavi project. The long-term PPA provides revenue visibility and mitigates the offtake risks for ABReSL. The tariffs offered by these projects is significantly cheaper than the grid tariff rates offered by the state discoms. Moreover, the power from these units of ABReSL will help HIL meet its RPO targets.

Presence of strong counterparty and timely payments – The presence of a strong counterparty like HIL is expected to result in timely payments for the company, as demonstrated so far for the operating capacity. Moreover, comfort can be drawn from the presence of a termination payment clause in the PPA, ensuring takeover of the project debt by HIL and equity compensation linked to the fair market value of ABReSL. Also, the PPA has a deemed generation clause ensuring payments to ABReSL in case of a disruption in generation due to reasons attributable to HIL.

Long tenure of project debt and cost-competitive debt likely to result in adequate debt coverage metrics – The company's leverage level is expected to remain high as the projects are funded through debt and equity in the ratio of 80:20. However, the coverage metrics are likely to remain adequate with cumulative DSCR above 1.25 times, supported by the long tenure of project debt and highly competitive cost of debt.

Credit challenges

Execution risk for under-construction projects and limited track record of generation for operational projects – The 49.2-MW capacity under ABReSL was commissioned between September 2021 and December 2021. The 51-MW Dahej project was commissioned in June 2023, whereas the 21 MW wind capacity at Bellary was commissioned in March 2024. Hence, there is limited track record of generation. Further, 21.1-MW capacity under ABReSL is under construction phase, thereby exposing it to execution risks. Nonetheless, comfort can be drawn from the advanced progress for the 9.4-MW project, thereby limiting execution related challenges.

Vulnerability of cash flows to variation in weather conditions – As tariffs are one part in nature, the company may book lesser revenues in the event of non-generation of power due to variation in weather conditions or equipment performance. This, in turn, would affect the company's cash flows and debt servicing ability. ABReSL's ability to ensure a satisfactory operational performance in line with the expected PLF level post the commissioning of the projects remains important from a credit perspective.

Leveraged capital structure and exposure to interest rate risk – The projects are being funded in a debt-to-equity ratio of 80:20. As a result, the company's capital structure is leveraged. Given the single-part nature of the tariff in the PPA and floating interest rates, its profitability and debt coverage metrics remain exposed to the variation in interest rates.

Regulatory risks – The company's operations are exposed to regulatory risks pertaining to the scheduling and forecasting requirements of solar and wind power projects. Also, the company remains exposed to regulations related to captive power projects and adverse variation in open access charges, which could impact the competitiveness of the tariff offered.

Liquidity position: Adequate

The liquidity position of the company is expected to remain adequate with expected cash flows from operations of ~Rs. 29-30 crore in FY2025 against the repayment obligation of Rs. 11.8 crore in the year. In addition, the company has cash balances of Rs. 37.2 crore including DSRA equivalent to one quarter of debt servicing as on March 31, 2024. The funding for the under-construction assets is expected to be met through equity from sponsor and debt funding. ICRA also draws comfort from the fact that this entity belongs to the Aditya Birla Group and support from the Group will be forthcoming in case of a cash flow requirement.

Rating sensitivities

Positive factors – ICRA could upgrade ABReSL’s rating if the credit profile of its parent, i.e., Aditya Birla Renewables Limited, improves.

Negative factors – The rating could be downgraded in case of any major time/cost overruns in commissioning the under-construction projects, impacting the company’s coverage metrics. Also, the rating may be affected if the generation performance is lower than the estimated levels, bringing down the cumulative DSCR below 1.20 times, or if there are delays in payments from the offtaker impacting its liquidity position. Further, any weakening of linkages with the parent or weakening of the credit profile of the parent will be a negative factor.

Analytical approach

Analytical Approach	Comments
Applicable Rating Methodologies	Corporate Credit Rating Methodology Rating Methodology for Solar Power Producers Rating Methodology for Wind Power Producers
Parent/Group Support	ICRA expects ABReSL’s parent, ABReL to be willing to extend financial support to ABReSL, should there be a need, given the high strategic importance that ABReSL has for ABReL
Consolidation/Standalone	The rating is based on the standalone financial profile of the company

About the company

ABReSL is a 74% subsidiary of ABReL with the remaining 26% shareholding held by HIL. ABReSL operates 121.2-MW (DC) solar power projects across five states (Madhya Pradesh, Maharashtra, Gujarat, Karnataka and Uttar Pradesh), has a 11.7-MW solar project under construction in Karnataka and another 9.4-MW floating solar project under-construction, taking the overall capacity to 142.3 MW. All the operational and under-construction projects are set up/being set up under the group captive mode wherein the counterparty is HIL.

Key financial indicators (Standalone)*

ABReSL Standalone	FY2023 (Audited)	FY2024 (Audited)
Operating income (Rs. crore)	20.33	43.34
PAT (Rs. crore)	2.7	-13.1

Complexity level of the rated instrument

Instrument	Complexity Indicator
Term loan	Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional, or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)

About ICRA Limited:

ICRA Limited was set up in 1991 by leading financial/investment institutions, commercial banks and financial services companies as an independent and professional investment Information and Credit Rating Agency.

Today, ICRA and its subsidiaries together form the ICRA Group of Companies (Group ICRA). ICRA is a Public Limited Company, with its shares listed on the Bombay Stock Exchange and the National Stock Exchange. The international Credit Rating Agency Moody's Investors Service is ICRA's largest shareholder.
