IIFL Samasta Finance Limited: Rating confirmed as final for PTCs backed by microfinance loan receivables issued by Gojo 06 2024

Summary of rating action

| Trust Name | Instrument* | Current Rated Amount (Rs. crore) | Rating Action |
|--------------|---------------|----------------------------------|--|
| Gojo 06 2024 | PTC Series A1 | 170.73 | [ICRA]AA-(SO); provisional rating confirmed as final |

*Instrument details are provided in Annexure I

Rationale

In July 2024, ICRA had assigned Provisional [ICRA]AA-(SO) rating to Pass Through Certificate (PTC) Series A1, issued by Gojo 06 2024. The PTCs are backed by a pool of a microfinance loan receivables originated by IIFL Samasta Finance Limited (Samasta/Originator) with an aggregate principal outstanding of Rs. 189.70 crore (pool receivables of Rs. 228.58 crore).

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

Pool performance summary

| Parameter | Gojo 06 2024 |
|---|--------------|
| Payout Month | July 2024 |
| Months post securitisation | 1 |
| Pool amortisation | 4.48% |
| PTC Series A1 amortisation | 4.98% |
| Cumulative prepayment rate | 0.37% |
| Cumulative collection efficiency | 99.18% |
| Loss-cum-0+ dpd | 0.91% |
| Loss cum 30+ dpd | 0.00% |
| Loss cum 90+ dpd | 0.00% |
| Cumulative cash collateral (CC) utilisation | 0.00% |

Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout. The principal is expected to be paid on a monthly basis (100% of the pool principal billed) but is promised on the final maturity date. The residual cash flows from the pool, after meeting the promised and expected payouts, will be flow back to the originator on a monthly basis. Any prepayment in the pool would be used for the prepayment of the PTC Series A1 principal.

The credit enhancement available in the structure is in the form of (i) a CC of 5.00% of the initial pool principal, amounting to Rs. 9.48 crore, to be provided by the Originator, (ii) principal subordination of 10.00% of the initial pool principal for PTC Series A1 and (iii) the excess interest spread (EIS) of 13.92% of the initial pool principal for PTC Series A1.

Key rating drivers and their description

Credit strengths

Granular pool supported by presence of credit enhancement – The pool as on the cut-off date is granular, consisting of 50,441 contracts, with no contract exceeding 0.01% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, subordination and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

No overdue contracts in the pool- The pool has been filtered in such a manner that there are no overdue contracts as on the cut-off date.

Seasoned contracts in the pool – The pool has amortised by almost 20% as on the cut-off date with no delinquencies seen in any of the contracts, post loan disbursement, thereby reflecting the borrowers' relatively better credit profile.

Credit challenges

High geographical concentration-The pool has high geographical concentration with the top 3 states, viz. Bihar, Uttar Pradesh and West Bengal, contributing ~54% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc. Nonetheless, the contracts are well-diversified across multiple districts with the top 10 districts constituting around 27% of the pool amount, which alleviates the concentration risk to some extent.

Risks associated with lending business – The pool performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The performance of microfinance loans would also be exposed to political and communal risks.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 4.5% of the initial pool with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 3% to 9% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

Details of key counterparties

The key counterparties in the rated transactions are as follows:

| Transaction Name | GOJO 06 2024 |
|------------------------------------|------------------------------|
| Originator | IIFL Samasta Finance Limited |
| Servicer | IIFL Samasta Finance Limited |
| Trustee | Catalyst Trusteeship Limited |
| CC holding Bank | IDFC First Bank |
| Collection and payout account Bank | IDFC First Bank |

Liquidity position: Strong

The liquidity for PTC Series A1 is strong after factoring in the credit enhancement available to meet the promised payouts to the investor. The total credit enhancement would be ~5.0 times the estimated loss in the pool.

Rating sensitivities

Positive factors – The rating could be upgraded on the strong collection performance of the underlying pool (monthly collection efficiency >95%) on a sustained basis, leading to the build-up of the credit enhancement cover for the remaining payouts.

Negative factors – Pressure on the rating could emerge on the sustained weak collection performance of the underlying pool (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and credit enhancement utilisation levels. Weakening in the credit profile of the servicer (Samasta) could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

| Instrument | Complexity Indicator |
|---------------|----------------------|
| PTC Series A1 | Moderately Complex |

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)
